Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

This Office action is in response to the amendment filed on 11/07/2008.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Kinugawa et al. (6,450,138).

Regarding claim 1: Kinugawa discloses a valve timing adjusting device (figure 8) comprising: a first rotor that integrally fixes a housing having the bearing of a camshaft, a case internally having a plurality of shoes projecting therefrom and having hydraulic chambers formed between the shoes, and a cover covering the hydraulic chambers, and that rotates integrally with a crank shaft (16,22); a second rotor that has a plurality of vanes each dividing the hydraulic chamber into an advanced-angle hydraulic chamber and a retarded-angle hydraulic chamber, can rotate through a predetermined angle within the first rotor, and is integrally fixed with an intake or exhaust camshaft (23); energizing means for adjusting the relative position between the first rotor and the second rotor (40,41); a groove provided on the opposite side of the shoe on the housing

side to accommodate one-end side of the energizing means (36); and a hole provided in the vane of the second rotor to accommodate the other-end side of the energizing means (39; figure 11, 39a,39b).

Regarding claim 2: Kinugawa as modified above discloses the groove accommodating the energizing means (36,37).

As to the method of molding, a product by process claim is rejected over a prior art product that appears to be identical, although produced by a different process, the burden is upon the applicants to come forward with evidence establishing an unobvious difference between the two. See *In re Marosi*, 218 USPQ 289 (Fed. Cir. 1983)

Regarding claim 3: Kinugawa discloses the position at which the energizing means becomes straight is positioned in the vicinity of the position at which the length of the energizing means becomes the maximum (figure 8).

Regarding claim 5: Kinugawa discloses a plurality of the energizing means are equally loaded and are disposed at a substantial equiangular space between the shoe and the vane (figure 5).

3. Claim 4 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Kinugawa.

Regarding claim 4: Kinugawa discloses figure 8 that appear to show the necessary relative dimensions of the spring and the groove which when maximally compressed would exceed the groove and thereby clearance is created between the shoe and the vane, absent evidence to the contrary, that the spring in the maximally compressed state is indeed provide the clearance.

Response to Arguments

4. Applicant's arguments filed on 11/07/2008 have been fully considered but they are not persuasive.
5. Kinugawa discloses a hole provided in the vane of the second rotor to accommodate the other-end side of the energizing means (figure 8, 39; figure 11, 39a,39b).

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
